Review of Systems in Pediatrics

Pediatric lab

Third Stage
Dr. Moustafa Ali Alshammari
Pediatric Nursing

General

- Overall state of health; weight loss/gain (compare with growth charts); obesity; delays in physical, psychosocial, or language development; fatigue; weakness; malaise; difficulty with ADLs; chronic pain.

Integument

- Skin texture, birthmarks, pigmentation; color changes (jaundice, cyanosis, mottling, pallor, bruising, petechiae); rashes, lesions; dryness; pruritus; hives; dermatitis; seborrhea; acne; mole changes; hair/nail disorders; pediculosis.

Head

- Size and shape (including fontanels); microcephaly, macrocephaly; injuries; headaches; dizziness.

Eyes

- Visual problems (blurred, double vision, strabismus, photophobia); behaviors (sitting close to screen, squinting, rubbing eyes); corrective lenses; last exam; drainage; infections; tearing; eyelid edema.

Ears

- Infections (otitis media/externa); ear pain; drainage; surgery (tympanostomy tubes); delayed speech; hearing loss; last hearing exam; tinnitus.

Nose

- Frequent rhinorrhea; URIs; sinusitis; allergic rhinitis; congestion; allergies; mouth breathing; snoring; OSA; epistaxis; allergic salute/crease; dark eye circles; altered smell.

Mouth/Throat

- Tooth eruption/loss; number of teeth; teething; dental care/fluoride; caries; first/last dental visit; pain; trauma; sores; candida; gum bleeding; tonsillar enlargement; tonsillectomy; postnasal drip; cleft lip/palate; sore throats; strep; dysphagia; hoarseness; abnormal cry.

Chest & Neck

- Chest: Pain, newborn breast enlargement, gynecomastia, lesions, discharge. Neck: Limited ROM, pain, stiffness, torticollis, thyroid enlargement, lymphadenopathy.

Lymphatics

- Frequent infections, fevers, node pain/swelling/tenderness, hepatosplenomegaly, chills, night sweats, pallor.

Respiratory

- Frequent infections, dyspnea, apnea, stridor, croup, pneumonia, CF, asthma, wheezing, chronic cough, sputum, exercise intolerance, cyanosis, TB exposure, last chest X-ray, smoke exposure.

Cardiovascular

- Murmurs, congenital heart disease, poor feeding/weight gain, chest pain, cyanosis, tachypnea, tachycardia, hypertension, edema, cold extremities, palpitations, syncope, exercise intolerance, rheumatic fever, anemia, transfusion history.

Gastrointestinal

- Appetite, intolerances, diet; abdominal pain; ulcers; nausea; vomiting; reflux; bowel changes; GI infections; diarrhea; flatulence; constipation; stool description; laxative use; blood in stool; jaundice; anal itching; fissures; pinworms.

Genitourinary

- Dysuria, frequency, urgency, enuresis; UTIs; hematuria; polyuria/oliguria; congenital anomalies (epispadias, hypospadias, cryptorchidism, hydrocele, hernia); surgeries; testicular self-exam (adolescents); STIs; sexual activity.

Gynecologic (Adolescent females)

- Age of menarche, LMP, cycle length/duration, dysmenorrhea, heavy bleeding, discharge, abnormal bleeding, sexual activity, contraception, last Pap smear, obstetric history if relevant.

Musculoskeletal

- Activity level, weakness, clumsiness, ataxia, lack of coordination, unusual movements; joint/muscle pain, cramps, swelling, sprains, fractures, mobility issues, stiffness, abnormal gait, limps, spinal curvatures.

Neurologic

- Affect, mood, ataxia, tremors, tics, dizziness, syncope, tingling, sensory changes, paresthesia, seizures, LOC, memory loss, headaches, aphasia, speech problems, fears, nightmares, unusual habits.

Endocrine

- Growth disturbances, obesity, polyuria, polyphagia, polydipsia, thyroid disease, type 1/2 diabetes, excessive sweating, salty skin, temperature intolerance, precocious/delayed puberty, hair distribution changes.

Hematologic

- Anemia, pallor, lymphadenopathy, bleeding disorders, bruising, petechiae, gum bleeding, transfusions, toxic exposures, radiation, chemotherapy.

Psychosocial Development

- Delays, behavior changes, tantrums, breath-holding spells, enuresis, school failure, withdrawal, irritability, sleep problems, depression, substance abuse, eating disorders, psychiatric disorders.
